

# WIPO Sequence Suite: Update

AUGUST 2, 2022

## New patched version: WIPO Sequence version 2.1.2

We are pleased to announce that we now have a patched version of WIPO Sequence, version 2.1.2, which resolves the following issues:

- ST26T-2906: After ST.25 import, an error is thrown indicating that the qualifier ID is not unique
- ST26T-2907: Sporadically sequences are generated without a feature table
- ST26T-2910: Auto-update does not download the latest binary

This patched version will be published on [our website](#) tomorrow, [August 3, 2022](#). As always, when you receive the auto-update message next time you open WIPO Sequence (and are connected to the internet), please select 'Yes' and this should initiate the download of this latest version. If this fails then please visit our website and download manually. Note that it was not necessary to update the WIPO Sequence User Manual so please continue to refer to version 2.1.0, which is also available on our website in all 10 PCT languages.

If you experience further issues with WIPO Sequence then you can report them by [contacting us](#).

All reported issues with WIPO Sequence are published, alongside any work-around, on the [WIPO Sequence and ST.26 knowledge base](#).

We thank you for your patience.
